

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic device that allows the person driving to be able to operate the forklift without leaving the seat. They are made out of top quality materials and are intended to be able to endure the most challenging operations and work surroundings. Side shifting units have the added ability to laterally position the arms or the entire load in order to facilitate more precise lifting and placement in a faster and much more effective manner.

The only one of its kind fork pocket design can enable the individual operating it to securely sway the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the choice to either perform simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into blade positioners on existing units.
